

- According to 2022 report, an estimated 1.8 billion adults were physically inactive, meaning they did not engage in at least 150 minutes of moderate-intensity physical activity per week.
- This represents about 31% of the global adult population.
- A study in The Lancet Global Health showed that in India, nearly 50% of adults are physically inactive.
- The study also found that more women (57%) than men (42%) in India are physically inactive.
